
Grade 9 Assessment of Mathematics Framework

This framework provides a detailed description of the EQAO Grade 9 Assessment of Mathematics, which is conducted each year in Ontario. It also describes how the assessment aligns with the expectations in *The Ontario Curriculum*.

Who Is This Framework For?

This framework has been prepared for

- educators;
- parents, guardians; and
- members of the general public.

Contents

Grade 9 Assessment of Mathematics

WHAT IS ASSESSED?

What Is Assessed in the Grade 9 Assessment of Mathematics?

Starting in the 2021–2022 school year, students enrolled in the MTH1W Grade 9 de-streamed mathematics course will be learning the knowledge and skills that are defined in the expectations found in the 2021 Ontario mathematics curriculum. The Grade 9 mathematics curriculum was developed to build on learning from *The Ontario Curriculum, Grades 1–8: Mathematics, 2020*, specifically the Grade 8 curriculum. This de-streamed mathematics course includes a new focus on coding, financial literacy and mathematical modelling, and extends learning in data literacy. The course also emphasizes connections among mathematical concepts, real-life applications and students’ lived experiences. Mathematics spans several content strands or domains. The Grade 9 content strands—Social-Emotional Learning (SEL) Skills in Mathematics¹; Mathematical Thinking and Making Connections; Number; Algebra; Data; Geometry and Measurement; and Financial Literacy—reflect those of the elementary program, as shown in the following table:

EQAO’s Grade 9 Assessment of Mathematics is a curriculum-based, standards-referenced, large-scale assessment. It is developed in relation to *Ontario Curriculum* expectations and standards for student proficiency. The assessment will consist of questions that cover students’ knowledge and skills in the following strands: Number, Algebra, Data, Geometry and Measurement, and Financial Literacy. Although the assessment does not measure the content in the Mathematical Thinking and Making

¹ Per 2021–2022 school-year sector direction from the Ministry of Education, social-emotional learning skills will not be assessed, evaluated or reported on.

Connections strand, students will be required to apply mathematical processes while completing the assessment. The assessment will not measure the content in the Social-Emotional Learning (SEL) Skills in Mathematics strand.

Mathematics Content Descriptors: Grade 9

The following are highlights of student learning from the MTH1W Grade 9 de-streamed mathematics course, listed by strand.

Number

- Development of Numbers and Number Sets
 - Development and Use of Numbers
 - Number Sets
- Powers
 - Powers
- Number Sense and Operations
 - Rational Numbers
 - Applications

Algebra

- Algebraic Expressions and Equations
 - Development and Use of Algebra
 - Algebraic Expressions and Equations
- Coding
 - Coding
- Application of Relations
 - Application of Linear and Non-Linear Relations
- Characteristics of Relations
 - Characteristics of Linear and Non-Linear Relations

Data

- Collection, Representation, and Analysis of Data
 - Application of Data
 - Representation and Analysis of Data
- Mathematical Modelling
 - Application of Mathematical Modelling
 - Process of Mathematical Modelling

Geometry and Measurement

- Geometric and Measurement Relationships
 - Geometric and Measurement Relationships

Financial Literacy

- Financial Decisions
 - Financial Decisions

THE ASSESSMENT PROCESS AND DESIGN

What Is in the Grade 9 Assessment of Mathematics?

The Grade 9 Assessment of Mathematics is an online assessment that consists of various types of questions, including technology-enhanced items, such as drag and drop, drop-down menu, and single- and multiple-selection questions. During the assessment, students will complete a total of 54 questions that include both operational questions, which count toward a student's final result, and field-test questions.

Introductory Session: Students will have the opportunity to participate in an introductory session that will familiarize them with the assessment. During this introductory session, students will have access to a sample test of 27 questions that shows the various types of questions that will be on the assessment. During the sample test, students will also be able to try out the tools (e.g., text-to-speech, zoom in and zoom out, calculator) available in the assessment. The sample test is also available on the EQAO public website.

Assessment Sessions: Students will complete the assessment in two sessions: Session A and Session B. Each session is designed to be completed in approximately 60 minutes, and students complete each session in one sitting. The sessions can be attempted one after the other, either back to back with a short break or on two different dates and times.

Questionnaire Session: At the end of the two assessment sessions, students will be presented with a questionnaire that asks them about their attitudes and perceptions with respect to mathematics. EQAO will use this data to provide schools, boards, teachers and parents/guardians with indications of how students' attitudes and perceptions are related to their mathematics achievement.

The assessment contains 54 questions (50 operational and four field-test questions) that are from the content strands (Number, Algebra, Data, Measurement and Geometry, and Financial Literacy). The four embedded field-test questions are not considered when determining a student's result and are fewer than 10% of the total number of questions completed by students.

Grade 9 Assessment of Mathematics Number of Questions

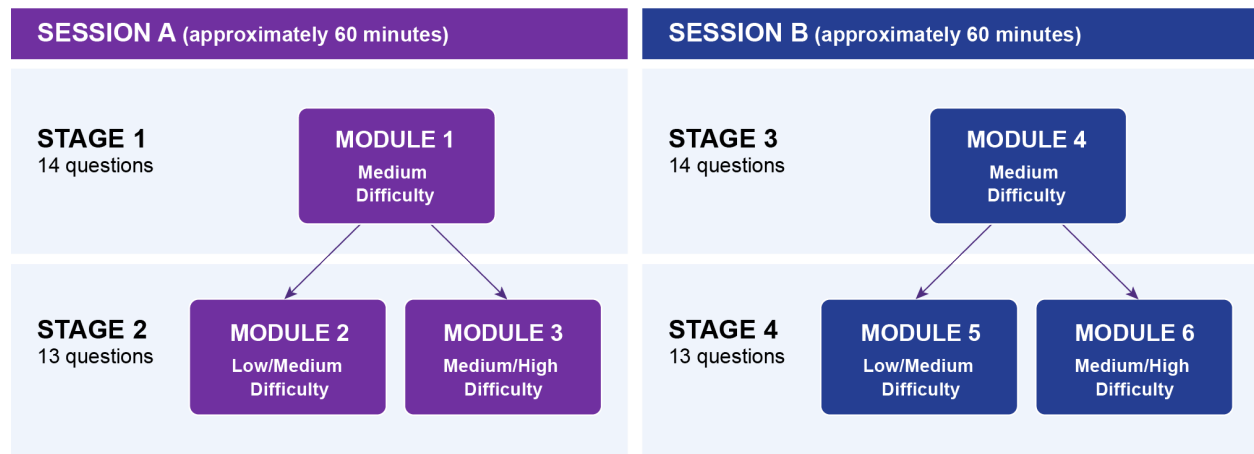

Question Type	Number of Questions
Operational	50
Field Test	4
Total Number of Questions for Each Student	54

What Is the Design of the Grade 9 Assessment of Mathematics?

The Grade 9 Assessment of Mathematics uses a multi-stage computer adaptive testing model that adapts to the individual student's performance as the student progresses through the two test sessions.

Each session is made up of two stages that are presented to students, based on their performance on the previous stage. Each stage is made up of modules that contain questions of a specific overall level of difficulty (medium, low/medium or medium/high).

Each student begins Session A by completing a set of questions with a medium overall level of difficulty contained in a module (Module 1 of Stage 1, as illustrated in the diagram below). Based on their performance on the operational questions in this first module, students are presented with a new module in Stage 2 with an overall level of difficulty of low/medium (Module 2) or medium/high (Module 3). The same process repeats for Session B.

Any field-test questions in Stage 1 and Stage 3 are not considered when determining the module the student will be routed to in the next stage.

How Are Curriculum Expectations Reflected in the Grade 9 Assessment of Mathematics?

The blueprint for the Grade 9 Assessment of Mathematics includes the overall and specific expectations from the Ontario curriculum for the MTH1W Grade 9 de-streamed mathematics course. The blueprint also provides the number of operational questions and the percentage of questions from each strand on the assessment that count toward the student's result.

BLUEPRINT FOR THE GRADE 9 ASSESSMENT OF MATHEMATICS

The Mathematical Processes

Although the Grade 9 assessment does not measure the mathematical processes, these are the processes through which students apply mathematical knowledge, concepts and skills.

- Problem Solving
- Reasoning and Proving
- Reflecting
- Connecting
- Communicating
- Representing
- Selecting Tools and Strategies

Grade 9 Assessment of Mathematics Blueprint

Number	Grade 9 Mathematics Expectations	Number of Questions	Percentage of Questions on the Assessment
B	Number		
B1	Development of Numbers and Number Sets		
	demonstrate an understanding of the development and use of numbers, and make connections between sets of numbers		
	Specific Expectations for Overall B1		
	Development and Use of Numbers		
B1.1	research a number concept to tell a story about its development and use in a specific culture, and describe its relevance in a current context		
	Number Sets		
B1.2	describe how various subsets of a number system are defined, and describe similarities and differences between these subsets		
B1.3	use patterns and number relationships to explain density, infinity, and limit as they relate to number sets		
B2	Powers		
	represent numbers in various ways, evaluate powers, and simplify expressions by using the relationships between powers and their exponents		
	Specific Expectations for Overall B2		
	Powers		
B2.1	analyze, through the use of patterning, the relationship between the sign and size of an exponent and the value of a power, and use this relationship to express numbers in scientific notation and evaluate powers		
B2.2	analyze, through the use of patterning, the relationships between the exponents of powers and the operations with powers, and use these relationships to simplify numeric and algebraic expressions	10	$\frac{10}{50} = 20\%$ of the questions on the assessment
B3	Number Sense and Operations		
	apply an understanding of rational numbers, ratios, rates, percentages, and proportions, in various mathematical contexts, and to solve problems		
	Specific Expectations for Overall B3		
	Rational Numbers		
B3.1	apply an understanding of integers to describe location, direction, amount, and changes in any of these, in various contexts		
B3.2	apply an understanding of unit fractions and their relationship to other fractional amounts, in various contexts, including the use of measuring tools		
B3.3	apply an understanding of integers to explain the effects that positive and negative signs have on the values of ratios, rates, fractions, and decimals, in various contexts		
	Applications		
B3.4	solve problems involving operations with positive and negative fractions and mixed numbers, including problems involving formulas, measurements, and linear relations, using technology when appropriate		
B3.5	pose and solve problems involving rates, percentages, and proportions in various contexts, including contexts connected to real-life applications of data, measurement, geometry, linear relations, and financial literacy		

Number	Grade 9 Mathematics Expectations	Number of Questions	Percentage of Questions on the Assessment
C	Algebra		
C1	Algebraic Expressions and Equations		
	demonstrate an understanding of the development and use of algebraic concepts and of their connection to numbers, using various tools and representations		
	Specific Expectations for Overall C1		
	Development and Use of Algebra		
C1.1	research an algebraic concept to tell a story about its development and use in a specific culture, and describe its relevance in a current context		
	Algebraic Expressions and Equations		
C1.2	create algebraic expressions to generalize relationships expressed in words, numbers, and visual representations, in various contexts		
C1.3	compare algebraic expressions using concrete, numerical, graphical, and algebraic methods to identify those that are equivalent, and justify their choices		
C1.4	simplify algebraic expressions by applying properties of operations of numbers, using various representations and tools, in different contexts		
C1.5	create and solve equations for various contexts, and verify their solutions		
C2	Coding		
	apply coding skills to represent mathematical concepts and relationships dynamically, and to solve problems, in algebra and across the other strands		
	Specific Expectations for Overall C2		
	Coding		
C2.1	use coding to demonstrate an understanding of algebraic concepts including variables, parameters, equations, and inequalities		
C2.2	create code by decomposing situations into computational steps in order to represent mathematical concepts and relationships, and to solve problems		
C2.3	read code to predict its outcome, and alter code to adjust constraints, parameters, and outcomes to represent a similar or new mathematical situation		
C3	Application of Relations		
	represent and compare linear and non-linear relations that model real-life situations, and use these representations to make predictions		
	Specific Expectations for Overall C3		
	Application of Linear and Non-Linear Relations		
C3.1	compare the shapes of graphs of linear and non-linear relations to describe their rates of change, to make connections to growing and shrinking patterns, and to make predictions		
C3.2	represent linear relations using concrete materials, tables of values, graphs, and equations, and make connections between the various representations to demonstrate an understanding of rates of change and initial values		
C3.3	compare two linear relations of the form $y = ax + b$ graphically and algebraically, and interpret the meaning of their point of intersection in terms of a given context		
		18	$\frac{18}{50} = 36\%$ of the questions on the assessment

Number	Grade 9 Mathematics Expectations	Number of Questions	Percentage of Questions on the Assessment
C	Algebra Continued		
C4	Characteristics of Relations	Continued from previous page	Continued from previous page
	demonstrate an understanding of the characteristics of various representations of linear and non-linear relations, using tools, including coding when appropriate		
	Specific Expectations for Overall C4		
	Characteristics of Linear and Non-Linear Relations		
C4.1	compare characteristics of graphs, tables of values, and equations of linear and non-linear relations		
C4.2	graph relations represented as algebraic equations of the forms $x = k$, $y = k$, $x + y = k$, $x - y = k$, $ax + by = k$, and $xy = k$, and their associated inequalities, where a , b , and k are constants, to identify various characteristics and the points and/or regions defined by these equations and inequalities		
C4.3	translate, reflect, and rotate lines defined by $y = ax$, where a is a constant, and describe how each transformation affects the graphs and equations of the defined lines		
C4.4	determine the equations of lines from graphs, tables of values, and concrete representations of linear relations by making connections between rates of change and slopes, and between initial values and y -intercepts, and use these equations to solve problems		
D	Data		
D1	Collection, Representation and Analysis of Data	8	$\frac{8}{50} = 16\%$ of the questions on the assessment
	describe the collection and use of data, and represent and analyze data involving one and two variables		
	Specific Expectations for Overall D1		
	Application of Data		
D1.1	identify a current context involving a large amount of data, and describe potential implications and consequences of its collection, storage, representation, and use		
	Representation and Analysis of Data		
D1.2	represent and statistically analyze data from a real-life situation involving a single variable in various ways, including the use of quartile values and box plots		
D1.3	create a scatter plot to represent the relationship between two variables, determine the correlation between these variables by testing different regression models using technology, and use a model to make predictions when appropriate		
D2	Mathematical Modelling		
	apply the process of mathematical modelling, using data and mathematical concepts from other strands, to represent, analyze, make predictions, and provide insight into real-life situations		
	Specific Expectations for Overall D2		
	Application of Mathematical Modelling		
D2.1	describe the value of mathematical modelling and how it is used in real life to inform decisions		
	Process of Mathematical Modelling		
D2.2	identify a question of interest requiring the collection and analysis of data, and identify the information needed to answer the question		
D2.3	create a plan to collect the necessary data on the question of interest from an appropriate source, identify assumptions, identify what may vary and what may remain the same in the situation, and then carry out the plan		

Number	Grade 9 Mathematics Expectations	Number of Questions	Percentage of Questions on the Assessment
D	Data continued		
D2.4	determine ways to display and analyze the data in order to create a mathematical model to answer the original question of interest, taking into account the nature of the data, the context, and the assumptions made	Continued from previous page	Continued from previous page
D2.5	report how the model can be used to answer the question of interest, how well the model fits the context, potential limitations of the model, and what predictions can be made based on the model		
E	Geometry and Measurement		
E1	Geometric and Measurement Relationships	8	$\frac{8}{50} = 16\%$ of the questions on the assessment
	demonstrate an understanding of the development and use of geometric and measurement relationships, and apply these relationships to solve problems, including problems involving real-life situations		
	Specific Expectations for Overall E1		
	Geometric and Measurement Relationships		
E1.1	research a geometric concept or a measurement system to tell a story about its development and use in a specific culture or community, and describe its relevance in connection to careers and to other disciplines		
E1.2	create and analyze designs involving geometric relationships and circle and triangle properties, using various tools		
E1.3	solve problems involving different units within a measurement system and between measurement systems, including those from various cultures or communities, using various representations and technology, when appropriate		
E1.4	show how changing one or more dimensions of a two-dimensional shape and a three-dimensional object affects perimeter/circumference, area, surface area, and volume, using technology when appropriate		
E1.5	solve problems involving the side-length relationship for right triangles in real-life situations, including problems that involve composite shapes		
E1.6	solve problems using the relationships between the volume of prisms and pyramids and between the volume of cylinders and cones, involving various units of measure		
F	Financial Literacy		
F1	Financial Decisions	6	$\frac{6}{50} = 12\%$ of the questions on the assessment
	demonstrate the knowledge and skills needed to make informed financial decisions		
	Specific Expectations for Overall F1		
	Financial Decisions		
F1.1	identify a past or current financial situation and explain how it can inform financial decisions, by applying an understanding of the context of the situation and related mathematical knowledge		
F1.2	identify financial situations that involve appreciation and depreciation, and use associated graphs to answer related questions		
F1.3	compare the effects that different interest rates, lengths of borrowing time, ways in which interest is calculated, and amounts of down payments have on the overall costs associated with purchasing goods or services, using appropriate tools		
F1.4	modify budgets displayed in various ways to reflect specific changes in circumstances, and provide a rationale for the modifications		

HOW THE ASSESSMENT IS SCORED

How Are the Questions on the Grade 9 Assessment of Mathematics Scored?

All the questions on the mathematics assessment are scored automatically (computer-scored).

How Is a Student's Score Determined?

The Individual Student Report provides information about each student's achievement on the assessment. This information enables students, parents/guardians and teachers to plan for improvement.
